Streszczenie

Biflavonoids from the leaves of *Wollemia nobilis* (Wollemi Pine) have been investigated and compared with data on other members of the family Araucariaceae. Based on ^1H and ^{13}C NMR as well as High Resolution Mass Spectrometry (HRMS) the structures of seven isolated biflavonoids were fully determined. Although all of them were previously characterised especially at *Agathis* and in lesser degree at *Araucaria* genera this is the first report on their occurrence at Wollemi Pine, one of the world's oldest and rarest plants.
